Background

The NARQ is based on the idea that narcissism can be decomposed into two positively correlated dimensions: *Admiration* and *Rivalry*. These dimensions each encompass different cognitive, affective-motivational, and behavioral facets and result from two distinct interpersonal strategies: the tendency to approach social admiration by means of self-promotion *(assertive self-enhancement)* and the tendency to prevent social failure by self-defense *(antagonistic self-protection).*Both dimensions share the overarching goal to maintain a grandiose self. Differentiating narcissistic admiration and rivalry promises to improve our understanding of the determinants, processes, and consequences of narcissism.
